

ORGANIC JAVA TAMAN DADAR

RAINFOREST ALLIANCE CERTIFIED

Coffee has been cultivated on the island of Java since the late 1600s; the first Dutch sailing ships carrying coffee back to Europe can be traced back to 1711. These ships would often stop at the port of Mokka in what is now modern-day Yemen and combine the Javanese coffee with the local production, resulting in the famous Mocca-Java blend. Most of the trees in Java at that time were planted in low-lying areas and by the late 1800s, they had become infested with coffee rust, a defoliant disease that thrives at lower altitudes due to the warmer climate. This was extremely detrimental to the quality and volume of coffee coming out of Java for several decades. This forced coffee production up to the highlands, where volcanic soil and higher altitudes laid the groundwork for a much better crop. Taman Dadar means "flower garden" which is the name the local farmers give to their area. This coffee comes from smallholder farmers in the villages of Curah Tatal and Kayumas on the Ijen Plateau in eastern Java. After employing organic farming techniques for generations, the farmers obtained organic certification enabling them to receive a premium for their production of this excellent coffee.

ORGANIC JAVA TAMAN DADAR

RAINFOREST ALLIANCE CERTIFIED

Location Curah Tatal and Kayumas, Java, Indonesia

Altitude 2900 - 5200 Feet
(884 - 1585 Meters)

Varietal S 795 (A Typica Hybrid)

Process Wet-hulled

Drying Sun-Dried on Bamboo Mats

Harvest Period May - September

Export Period June - November

PROUDLY
PROVIDED BY:

Royal Coffee New York, Inc.
